What's Going on in There? Understand Adolescent Brain Development for Programming & Employment

Do you have employees 24 years of age or younger? Do you plan programs for children and youth; maybe you prepare and offer parenting classes or you get to have fun all day working with kids, one question that comes up over and over again; “Why do they act that way?” Research is giving us new insights to that question and together we will explore brain development of young people and how we can impact ‘new pathways’ through positive experiences and supportive, positive relationships. We’ll explore scientific findings through easy-to-understand terms and learn ways to be creative with programming, relationship building and interaction with all young people.
